Document 28 — Operations Guide

The day-2 playbook. How on-call works, what to do in an incident, how to run a release, and how to keep the platform healthy.

- 14. Appendix

1. Purpose & Scope

This document is the contract for operations — what happens after a feature is built. It governs on-call, incident response, releases, scaling, and the recurring rhythms that keep the platform healthy.

2. Roles

On-call primary	First responder; pages → triage → engage
On-call secondary	Backup; engages on primary unavailability
Service owner	Owns the service's runbook and SLOs
Incident commander	Runs the incident; coordinates response
Comms lead	Owns customer comms during the incident
Security lead	Owns security incidents and forensics
SRE	Owns the platform; deploys, scales, debugs infra

3. On-call

- Tooling: PagerDuty + Slack + Datadog + AWS console.
- Expectation: acknowledge within 5 min; engaged within 15 min.
- Compensation: paid on-call stipend; documented in the People handbook.

4. Incident response

4.1 Severity

SEV-1	Major outage; data loss; security breach	< 15 min	Status page + email
SEV-2	Significant degradation; partial outage	< 30 min	Status page
SEV-3	Limited impact; workaround exists	< 24h	Backlog
SEV-4	Cosmetic / minor	< 1 week	Backlog

4.2 Process

1. Detect — page from monitoring, customer report, or internal user.
2. Triage — on-call confirms; declares severity; opens incident channel.
3. Mitigate — restore service (rollback, scale, disable feature flag).
4. Resolve — find and fix root cause.
5. Close — verify; post comms; schedule postmortem.

4.3 Communication

- Status page updated within 15 min for SEV-1/2.
- Customer email within 1h for SEV-1.
- In-app banner for active incidents.
- Postmortem published within 7 days.

5. Runbooks

Every service has a runbook with:

- Service overview (one paragraph).
- Health endpoints and what they mean.
- Common failure modes and responses.
- Escalation contacts.
- Links to dashboards.

6. Releases

See Document 24 §6. The release flow is:

1. Tag vX.Y.Z.
2. Auto-deploy to canary.
3. Soak 24h; SLO monitoring.
4. Auto-promote or hold.
5. Release notes auto-generated; manually edited.
6. Customer comms drafted (in-app banner, email, status page if relevant).

7. Capacity & scaling

- Stateless services scale on CPU + RPS.
- Stateful services scale via replicas; vertical scale for primary DB.
- AI plane scales on queue depth; preemptible workers for backfill.
- Forecasting monthly; pre-provisioning for known spikes.

8. Disaster recovery

- See TRD §12 and Document 21 §12.
- RPO 1h, RTO 4h.
- Drill quarterly; result reviewed; misses are SEV-2.

9. Cost management

- Per-service cost dashboarded daily.
- Per-workspace cost dashboarded daily.
- Budgets with 80% and 100% alerts.
- Reserved capacity reviewed quarterly.
- Anomaly alerts on $> 2\sigma$ deviation.

10. Vendor management

- Critical vendors (Auth0, Anthropic, OpenAI, Stripe, AWS) reviewed quarterly.
- Contract renewal calendar owned by finance.
- Status feeds integrated into our status page where possible.
- Vendor incidents are tracked and reviewed.

11. Customer comms during incidents

- Email within 1h of SEV-1.
- Postmortem published within 7 days.
- Template library maintained by the comms lead.

12. Postmortems

- Required for SEV-1 and SEV-2; encouraged for SEV-3.
- Format: blameless; timeline; contributing factors; customer impact; what we learned; action items.
- Action items are tickets with owners and dates.
- Reviewed by leadership monthly.
- Trend tracked; systemic issues are escalated.

13. Continuous improvement

- Weekly ops review — incidents, alerts, on-call feedback.
- Monthly SLO review — SLO compliance and trends.
- Quarterly DR drill.
- Annual — major tabletop; full security review.

14. Appendix

14.1 Revision history

v0.5	2026-07-20	Doc Team	All sections drafted
v1.0	2026-07-20	Doc Team	First approved version

14.2 Cross-references

- DevOps: Document 23.
- Monitoring: Document 25.
- Security: Document 21.
- AI Operations: Document 18.

End of Document 28 — Operations Guide. Operations is the discipline that makes the system trustworthy.
